> **Place:** George Mason University Prince William Campus
>
> **Sponsors:** George Mason University & COTS VOIP
> Subworkgroup

The Council on Technology Services (COTS) Voice Over Internet Protocol (VoIP) Subworkgroup was pleased to host the VoIP Forum. Secretary Donald W. Upson created the VoIP Subworkgroup to address the growing interest in voice over data technology within the agency and vendor communities. The purpose of the workgroup was to investigate strategies for voice over data technology in the Commonwealth, make recommendations for the technology's deployment and develop migration plans to the new services. This forum was designed to gather and share information about voice over data technology within the state, and discuss views important to developing strategies for deploying this technology. Interested information technology professionals representing state agencies, and institutions of higher education, local governments, and the vendor community were invited to share ideas and perspectives on this technology. As you can see, we developed an exciting agenda.

The VoIP Forum was held on Monday, July 31, 2000 at George Mason University - Prince William Campus in Manassas, Virginia in the GTE Auditorium.

Agenda

> **Date:** July 31, 2000
